LEARNING WHEN INFRASTRUCTURE FAILS

THE ASTAR DESIGN SYSTEM

01 Make the idea unmistakable

Oversized uppercase headings. Short explanations. Strong contrast. One purple emphasis per message.

02 Build on the supplied presentation

Alternate near-black and warm ivory. Use fine rules, numbered sections and bold type. Keep product imagery large.

03 Keep the logo intact

Use the supplied logo on a white field. Preserve the gradient, proportions and whitespace. Do not redraw or stretch the mark.

04 Show the actual development stage

Use real software screens. Label hardware renders as concepts. Present cost targets as estimates and partners as prospective.
