

Learning should not stop when the lights go out

Autonomous Solar Tutoring and Resource System

Learning needs a dependable fallback

When power, connectivity or access to schools is interrupted, students can lose access to digital lessons.

ASTAR is designed to keep structured learning materials within reach.

Three parts, one learning experience

01

ASTAR device

Proposed solar-powered educational hardware

02

ASTAR software

Offline lessons, practice and local progress

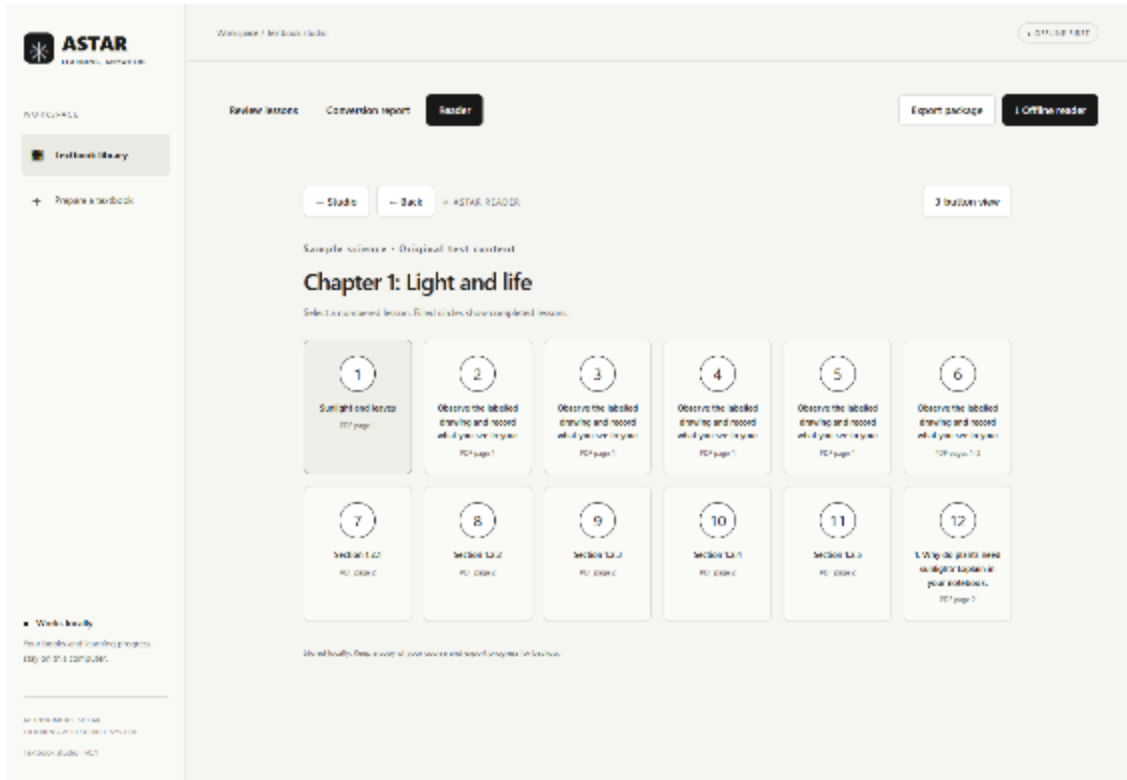

03

ASTAR Forge

Content preparation, review and export

Choose a lesson. Keep learning.

Numbered chapters and lessons
Monochrome reading and diagrams
Local completion and resume state

Existing software / saved development screenshot

Preserve the detail that learning needs

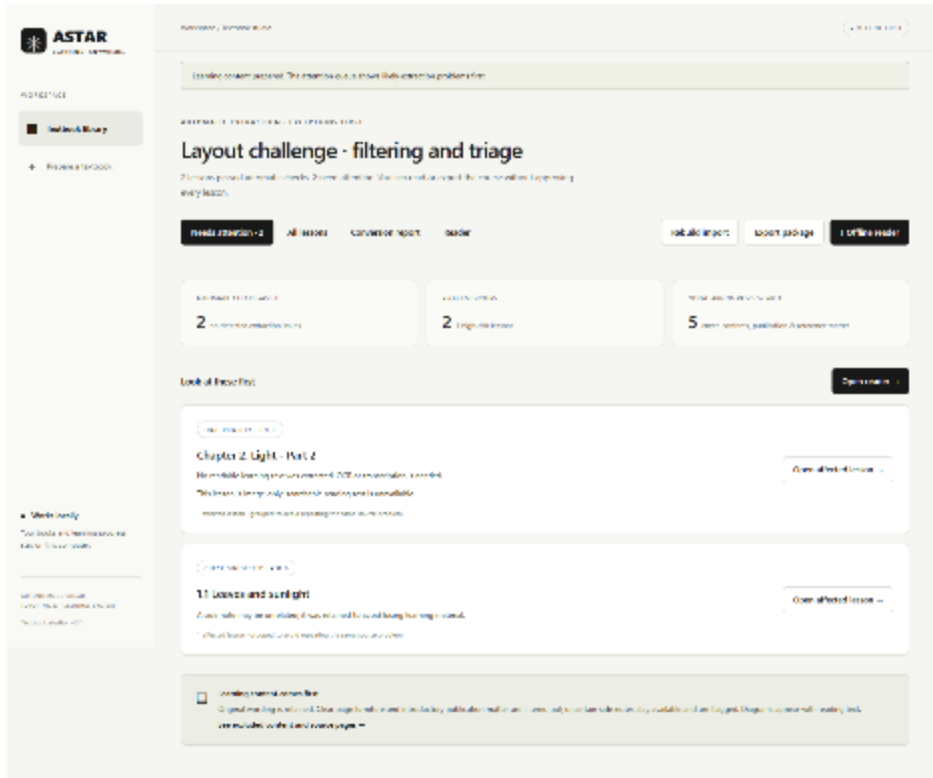

Textbook reading with diagrams
Page references and original prompts
Teacher-authored interactive practice

Existing software / saved development screenshot

Prepare content with review built in

Import a textbook PDF
Inspect flagged conversion issues
Export a standalone offline reader

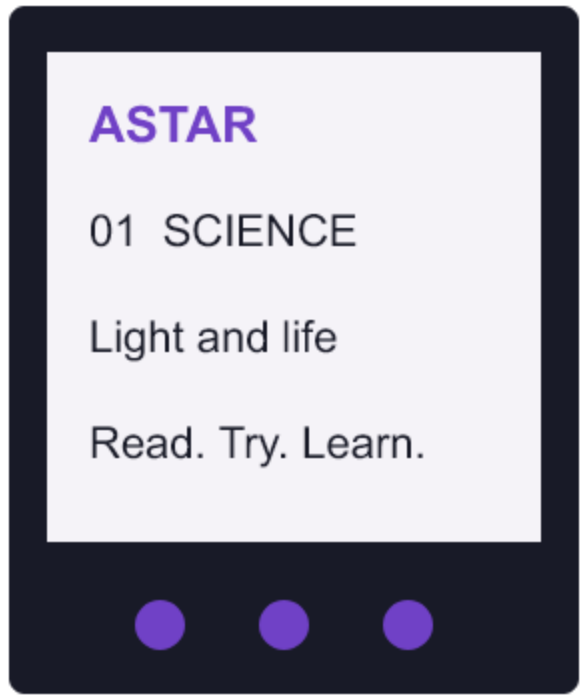

Existing software / saved development screenshot

The solar device is the next step

E-paper display and physical controls
Local lessons and storage
Solar charging with battery storage

Next: validate components, power use and firmware

Device design concept

Start with an education partner

Intended learners
Students aged 10-18 in disrupted and underserved settings

Proposed route
Partner-led pilot, facilitator support and local content review

An institutional model to validate

INR 3,700

Founder target unit cost

INR 4,700

Founder target institutional price

Unvalidated estimates. Full component, logistics and support costs remain to be established.

Make the next milestone measurable

1. Validate the hardware energy budget
2. Review a small curriculum package
3. Test reading and navigation with learners
4. Refine cost and partner-led pilot design

ASTAR

Help us make learning more resilient

Seeking technical mentors and education collaborators
